TIERS OF EMERGENCY LIGHTING

ARCHITECTURAL GRADE

Featuring advanced technology to ensure reliability in critical situations, architectural-grade products are crafted from high-quality materials and designed with precise engineering. These solutions provide exceptional durability and functionality. Emergency lighting integrates into architectural design with a high degree of customization available, enhancing safety and aesthetics.

COMMERCIAL GRADE

Balancing performance and cost, commercial-grade emergency lighting offers reliable solutions for various applications. Constructed with quality materials and sound engineering, these products deliver dependable functionality without compromising durability. With moderate customization options, they provide a practical blend of efficiency and design flexibility for commercial environments.

CONTRACTOR GRADE

An economical choice, ensuring affordability even if purchased in excess, contractor-grade emergency lighting is designed to function effectively in most applications. These solutions prioritize cost over design and flexibility, offering a practical option for projects where budget constraints are a primary concern.

THE ARCHITECTURAL DIFFERENCE

1 SEAMLESS CONSTRUCTION

Precise assembly with no visible gaps, ensuring consistent color and material alignment across components.

2 DEFINED EDGE DESIGN

Sharper edges with minimal radii for a sleek and modern look.

3 SUBTLE INTEGRATION

Clear-backed exit legends or a compact design for a discreet wall presence.
